

Background Information

- There is a already and existing table for ALAT customer consent; dbo.NDPR
- 2. This table has the followling columns; id, CustomerId, IsNDPRAccepted and DateTime
- 3. There is another table where CusitomerId can be used to generate customer name, customer primary account number, CIF etc
- 4. I recommend that the table in item 2 be used as the centralized table by creating additional colums; CIF, Customer Name, uploaded file
- 5. ALAT team should populate the table in intem 2 with customer records in item 3
- 6. Signing of the consent form by the customer and scaning is a manual process outside the proposed system
- 7. The centralize consent portal should have the following fields: CIF, Customer Name, Customer primary account number, datetime, IsNDPRAccepted, scannedDocument, Id while customerId will be null for the walking-in cust
- 8. Sample of dbo.NDPR
